

# Mounting and Matting

## Why mount or mat photographs:

Presentation- images look better when held flat and isolated from the surrounding environment

Protection- photographs are protected from damage by handling. Archival materials protect the print from chemical contamination.

Framing- window mats separate the image from the framing glass.

Prints can be mounted using a special cold mount adhesive, spray adhesive, special double stick adhesive and dry mounting. In this class we will use the dry mount press.

## Print preparation:

Prints should be of the highest quality. They should be processed completely with adequate fixing and washing to ensure longevity. Any dust spots and scratches should be retouched. Leave the border on the print.

## Mat Board:

There are many **types** and grades of mounting board based on archival properties, thickness, surface texture and color. White or off white board is most common for photographs and are the only colors that should be used in this class.

Mat board should protect the photograph, not chemically deteriorate it. The wrong board can discolor the print. Inexpensive board is made from paper and may contain acids that will harm the photograph. Medium grade paper board (Conservation Board) may be created “acid free” or treated (buffered) to neutralize the acid and protect the photo for decades. Museum quality boards are made from cotton (100% rag) rather than paper and are highly archival, containing no acid.

Mat board comes in different thicknesses or weights sometimes measured in “plys.” The most common weight for mounting photographs is 4 ply.

**Size:** Mat board comes in full sheets of 22” x 30” and 32 x 40 and also in pre-cut sizes. The size of the mat depends on the size of the photo and aesthetic considerations. Standard pre-cut sizes are 11” x 14”, 12” x 16” and 16” x 20”. For our images on 8” x 10” paper we will mount on 11” x 14” board.

## Equipment and supplies:

Mat Knife  
Cutting Surface  
Ruler  
Dry mount press  
Tacking iron  
Dry mount tissue  
Paper trimmer  
Cover paper  
Pencil  
Kneaded eraser

### For window mat:

Photo corners  
Linen tape  
Mat cutter  
Photo quality tape

## Class Requirements:

Size 11” X 14”

Color - White or off white (No Black)

At least One window mat

No store bought window mats

Identify every print:

Name

Class - Fall 2004 (A afternoon or B Evening)

Roll #, Frame #, Date

Matted Photos to include:

- 1) People
- 2) Experimental
- 3) Directional Light
- 4) Your choice

Do not mount motion and depth of field prints.

## Standard dry mount procedure:

### Have mat board cut to size and untrimmed, spot-toned print

- 1) Turn on Dry Mount Press set to 200 degrees
- 2) Turn on Tacking iron
- 3) Remove any dust from print on both sides
- 4) Use tacking iron to attach dry mount tissue to back of print with X pattern
- 5) Use paper trimmer to remove white border from photo- photo & tissue are now exactly the same size
- 6) Align the print with tissue face up on the mat board with ruler or t-square
- 7) Protect print with clean paper- hold in place with a weight
- 8) Lift one corner of the print and tack the tissue in place - make sure print doesn't move
- 9) Tack the opposite corner - make sure the print is flat and hasn't moved.
- 10) Check alignment to make sure the print hasn't moved
- 11) Place mat and print in press, cover with clean paper sheet
- 12) Clamp press down for 30 seconds (time may vary based on paper weight and brand of dry mount tissue)
- 13) Remove from press and clamp in cold press for one minute to prevent warping
- 14) Remove and check for proper adhesion by gently bending board

## Using the Centering T-Square

- 1) center the mat board on the stationary ruler-
- 2) use T-square to center print left to right
- 3) turn on side to align top to bottom or use a separate ruler- center or leave more room on bottom

## Over Mat or Window Mat procedure:

### 2 same sized sheets of mat board, untrimmed print

- 1) Use ruler or alignment T-Square to position photograph on backing board- mark corners with light pencil
- 2) Attach archival photo corners (or make your own) to at the marked corners- leave a little room for the print expand.
- 3) Insert the print in the corners and check for alignment
- 4) Use T-Square to mark pencil cut lines on back of window mat
- 5) Use mat cutter to cut open window mat
- 6) Use linen tape to hinge window mat to backing board

Use the T-square to draw lines on back of overmat for cutting window. Allow 1/8" for overlap.
